

Task 1 - Create a Virtual Machine (MyTestVM)

- Open Hyper-V Manager.
- Click New
 - Virtual Machine.
- Click Next.
- Enter MyTestVM as the name.
- Keep default settings.
- Assign memory (e.g., 2048 MB).
- Create a virtual hard disk (default or 40 GB).
- Finish the wizard.

Task 2 - Create a Virtual Switch and Connect VM

- In Hyper-V Manager, click Virtual Switch Manager.
- Select External.
- Click Create Virtual Switch.
- Give it a name (e.g., InternetSwitch).
- Select your physical network adapter.
- Click Apply
 - OK.
- Open MyTestVM Settings.
- Select Network Adapter.
- Choose InternetSwitch from the dropdown.
- Click Apply
 - OK.

Task 3 - Install Windows 10 ISO

- Open MyTestVM Settings.
- Select DVD Drive.
- Choose Image File (.iso).
- Browse and select the Windows 10 ISO.
- Start the VM.
- Complete the Windows installation.
- Verify that Windows reaches the desktop.

Task 4 - Create and Test a Checkpoint

- Right-click MyTestVM.
- Select Checkpoint.
- Start the VM.
- Create a folder on the desktop named TestFolder.
- Shut down the VM.
- Right-click the checkpoint and choose Apply.
- Start the VM again. Verify that TestFolder is gone.

Task 5 - PowerShell Commands

- Run PowerShell as Administrator and execute:
 - `New-VM -Name "MyTestVM_PS" -MemoryStartupBytes 2GB -NewVHDPATH "C:\HyperV\MyTestVM_PS.vhdx" -NewVHDSIZEBytes 40GB -Generation 2`
 - `Start-VM -Name "MyTestVM_PS"`
 - `Get-VM`
- Verification:
 - `Get-VM | Format-Table Name, State`
